Dynamics Analysis and Intelligent Control in Industrial Engineering

Message from the Guest Editors

This Special Issue on "Dynamics Analysis and Intelligent Control in Industrial Engineering" reflects and addresses the above challenges and needs, aiming to provide a platform for researchers, scientists, engineers, and others who are active or interested in this area to showcase and exchange their research progress, new discoveries, innovative developments, and applications in the field. Topics of interest in this Special Issue include but are not limited to:

- Intelligent control of process equipment;
- Intelligent vibration suppression of manufacturing equipment;
- Power system simulation, analysis, and control;
- Dynamic analysis of the operation process of airplanes, high-speed rail, automobiles, and ships;
- Vibration monitoring and safety control for petrochemical equipment;
- Fault diagnosis in medical devices;
- Robot dynamic analysis and intelligent control;
- Data analysis of other engineering equipment health-monitoring systems utilizing artificial intelligence technology;
- Modeling and dynamic analysis of intelligent vehicle systems.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief
