

Special Issue

Advances in Green Extraction and Separation Processes

Message from the Guest Editors

Nowadays, the use of conventional solvents remains a concern due to their environmental damage and potential health risks to humans. Therefore, it is crucial to promote investigations that address sustainable processes for extracting and separating pivotal molecules using green solvents (deep eutectic solvents, ionic liquids, supercritical solvents, low- and high-pressure solvents). This Special Issue on “Advances in Green Extraction and Separation Processes” will encompass novel articles or reviews that are in concordance with Green Chemistry principles and commitment to the sustainable processes aims to extract and separate value-added molecules. Topics include, but are not limited to:

- Novel design and implementation of DES mixtures and ionic liquids
- Supercritical CO₂ technology
- Subcritical water, pressure hot water, steam explosion, or organosolv.
- Adsorption–desorption processes
- Membranes technologies
- Advances in enzyme formulation and application

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
