Special Issue

Numerical Modelling of Fluid-Structure Interaction Systems

Message from the Guest Editors

Fluid-structure interaction (FSI) is a very common physical phenomenon that inherently exists in nature, human daily life, and many engineering applications. Typical examples include flapping insects and birds, blood flows in arteries, the tail flutter of aircraft wings. vibration of turbines and compressors, etc. In most FSI problems, it is not possible to obtain analytical solutions due to the inherent complexity of such problems, and experimental studies are generally limited in scope. Accompanied by the significant development of highperformance computers in the last few decades, computational methods have been successfully applied to many new areas as an effective FSI modeling method. This Special Issue on the "Numerical Modelling of Fluid-Structure Interaction Systems" will present novel advances in research which either use computational methods to study and analyze fluid-structure interaction systems, or present novel numerical methods for challenging fluid-structure interaction systems in the fields of aeronautical engineering, biomechanical engineering, biomedical engineering, environmental engineering, etc.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
