Application of Carbon-Based Nanocomposites in Bioengineering and Biomedicine

Message from the Guest Editors

Nanocarbon materials, unlike inorganic materials, are compatible materials for environment and biology systems because carbon is one of the basic elements in biological systems. Carbon is of great interest to the scientific community due to the existence of several allotropes (i.e., fullerenes, carbon nanotubes, graphene, and carbon quantum dots). corrosion, high strength, stability, and exceptional electrical and thermal conduction. Because of these unique properties, carbon-based nanomaterials are used in a wide range of fields, including biotechnology and medicine. Some examples of recent applications of carbon-based nanomaterials in biomedicine include targeted drug delivery, cancer therapy, bio-sensing, cell and tissue imaging, and regenerative medicine. This Special Issue on "Application of Carbon-based Nanocomposites in Bioengineering and Biomedicine" will gather high-quality works related to the biomedical applications, biotechnology processes, and environmental applications.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
