### Materials Processing for Production of Nanostructured Thin Films

### Message from the Guest Editor

The production of thin films presenting features on the scale of nanometers is important in different areas of technology, including array technology; displays; surfaces with special optical properties; surfaces with novel wetting or adhesion behavior; as surfaces for cell growth, catalysis, solar energy, chemical or biological sensing; and in medical devices. Such thin films can have unique electronic, optical, magnetic, chemical, biomaterial, or interfacial properties. The processes by which such thin films are produced have expanded to include novel approaches using chemical vapor deposition, physical vapor deposition, atomic layer deposition, patterning using laser or ion beams, selforganized polymerization reactions, controlled corrosion, electrodeposition onto templates, chemical surface modification, electroless deposition, and other specialized material processing methods. This Special Issue is intended to feature methods for producing nanostructured thin films, new developments, detailed characterizations of thin film structure and properties, and examples of their application.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

### Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

### **Author Benefits**

### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: CiteScore - Q2 (Chemical Engineering (miscellaneous))
