Fermentation and Bioprocess Engineering Processes

Message from the Guest Editors

Fermentation process is an approach that promote growth of microorganisms for production of value-added products such as organic acids, enzymes, vitamins, and biopharmaceuticals. Through fermentation, raw agricultural bioproducts or industrial wastes can be converted into value-added products. Production of value-added products from agricultural raw materials not only increases the value of our farmers' crops but also improves the wellbeing of our people. In most cases, the dependency on petroleum-based products can be minimized, because the same products can be obtained via microbial fermentation utilizing renewable raw materials such as corn and potatoes. In terms of renewable energy production, biogas, ethanol, and bio-hydrogen are the most promising microbial products. This area alone is very exciting since we need new and cleaner energy sources as petroleum sources are rendering unsustainable. On the other hand, many compounds related to human health such as vaccines and prebiotics etc. can be produced in bioreactors with different microorganisms and fermentation techniques.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
