Sustainable Processing of Food Packaging Materials

Message from the Guest Editors

Food packaging is an important parameter that can help to prolong the shelf life and reduce the wastage of food.

The use of energy and resources to develop food packaging should be minimized and kept as environmentally friendly or "green" as possible. New solutions for the synthesis of food packaging materials which could be described as sustainable processes or which could have a positive environmental impact are desired. These might include the limited use or replacement of organic or harmful solvents during processing, or green processing technologies applied to the synthesis of food packaging materials. We are interested in innovations in food packaging for meat, seafood, vegetables, or any wet, dry, or fresh produce. Topics include, but are not limited to, the following:

- Green processing technology applied to the synthesis of food packaging;
- Novel biopolymers from waste streams for use in food packaging;
- Biodegradable or edible food packaging;
- Smart, active, or intelligent food packaging;
- Microbes producing polymers for food packaging;
- Nano-technology.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Chemical) / CiteScore - Q2 (Chemical Engineering (miscellaneous))
