

## Special Issue

# Supercritical Technology Applied to Food, Pharmaceutical and Chemical Industries

### Message from the Guest Editors

Everyday life has made consumers genuinely concerned about the origin of the products they consume.

Therefore, green technologies are overly requested in industrial processing for developing more and more products with a high-quality standard. One of these green technologies is the use of supercritical and pressurized fluids, which may be used in one or several stages of industrial processing. This Special Issue intends to cover various aspects of supercritical technology applied to food, fuel, natural products, pharmaceuticals and materials processing. The manuscripts should focus on (the) extraction, particle formation, hydrolysis, gasification, reactions and catalysis, among other processes that employ high-pressure technologies in an environmentally friendly way. Uses of supercritical chromatography and hyphenated methods with supercritical fluids and pressurized liquids for food and drugs quality assessment are welcome. Modeling, survey papers and reviews are also welcomed.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

#### Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
