Hybrid Solar-Powered Heat Exchanger Systems: Innovations and Challenges

Message from the Guest Editors

Hybrid solar-powered heat exchanger systems represent a pathway toward greater energy efficiency and sustainability, as they combine solar thermal energy with traditional heating methods. These systems harness solar energy via solar collectors and channel it through heat exchangers for use in diverse applications such as industrial operations, residential heating, and cooling technologies. Emerging technologies are proving instrumental in enhancing thermal responsiveness and energy storage. The incorporation of smart technologies enables real-time data monitoring and adaptive system control, further boosting operational efficiency. Despite these advancements, this field continues to face challenges such as high upfront costs, limited thermal storage capabilities, and difficulties in retrofitting existing systems. Addressing these barriers through research and innovations is essential to accelerate the adoption of hybrid solar-powered heat exchanger systems. While the technological progress is encouraging, sustained research and collaboration are vital to unlock the full potential of these systems and support the global shift toward cleaner and more resilient energy solutions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
