

Special Issue

Green Metallurgical Process and Technology

Message from the Guest Editors

Recent advances in energy recovery and advanced technology for the metallurgy process have attracted attention. These include hydrogen smelting, electric furnace steelmaking, and high-nitrogen steel smelting technologies and the recovery of waste heat from metallurgical processes, amongst others. To achieve green metallurgical processes and technology, it is necessary to decrease energy consumption in iron and steel production. This Special Issue is aimed at all researchers and technologists interested in all aspects of the science, technology, and applications of green metallurgy processes and technology. It will feature original research papers and reviews related to hydrogen smelting, electric furnace steelmaking, high-nitrogen steel smelting, and energy recovery. "Green Metallurgical Processes and Technology" aims to gather novel advances in reducing energy consumption and CO₂ emissions during the metallurgy process. Potential topics include the following:

- Hydrogen, low-carbon, and high-nitrogen smelting technologies;
- CO₂ resource utilization;
- Electric furnace steelmaking;
- Recovery of waste heat from metallurgical slag.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
