

Special Issue

Modeling and Simulation of Enzymatic Catalysis Processes

Message from the Guest Editor

Enzymes play a central role in life, catalyzing many chemical and biological processes occurring in nature. Understanding how enzymes catalyze their reactions is essential, both from fundamental and practical perspectives, with application in a variety of areas, from more basic research that aims to understand how different events occur in the cell, to the development of new treatments for important diseases, and even in industrial biocatalytic applications. Computational methods can be used to simulate and model different enzymatic reactions, circumventing some of the limitations of the experimental methodologies typically used, and providing an alternative strategy to complement the information obtained from these methods. This Special Issue focuses on the application of computational methods for modeling and simulating enzymatic reaction mechanisms, including methodological developments and computational studies addressing the activity of specific enzymes.

Guest Editor

Dr. Sérgio Filipe Sousa

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
