Special Issue

Flexible Electrodes for Electrochemical Energy Storage

Message from the Guest Editors

Electrochemical energy storage systems find wide applications in powering an ever-increasing number of portable electronic devices and hybrid/electric vehicles, as well as storing energy from intermittent renewable energy. The recent growing development in flexible electronics calls for fiber-like, paper-like, or textile electrodes for electrochemical energy storage devices. Its success is dependent on advanced electrode materials with good flexibility, excellent mechanical stability (which can withstand multiple deformation cycles), high areal/volumetric capacity, long charging/discharging life span, and low cost. This Special Issue aims to gather recent cutting-edge research toward flexible electrodes for electrochemical energy storage, including but not limited to: ·

- Flexible electrodes for flexible lithium-ion batteries;
- Flexible electrodes for flexible sodium-ion batteries;
- Flexible electrodes for flexible zinc-ion batteries;-
- Flexible electrodes for supercapacitors.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank: CiteScore - Q2 (Chemical Engineering (miscellaneous))
