

Special Issue

Application of Heat Recovery Systems in Energy

Message from the Guest Editors

Heat recovery is one of the major issues for the sustainable energy industry and a wide range of technologies are now available to recover lost heat in various heavy, energy-intensive factories and plants, from chemical industries to power plants and food manufacturing plants, etc. The amount of energy that is lost through emissions can be greatly reduced by the use of heat recovery systems. In this regard, exploring the application of heat recovery system in different energy industries seems critical to building a carbon-neutral society. Thus this Special Issue (SI) focuses on the analysis, modelling, design, optimization, and management of the heat recovery systems and their applications in various energy industries. Manuscripts on related topics, such as energy conservation, energy conversion, energy efficiency improvement, exergy analysis, and on economic and policy issues, are also welcome in this Special Issue to offer insight to the future readers into the current state of this wide topic.

Keywords

- heat recovery systems
- heat integration
- energy systems
- energy conversion
- energy management
- energy conservation
- waste heat

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto
Department of Drug Science and Technology, University of Turin, Via P.
Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
