Recent Advances in Pollutant Biosorption Processes

Message from the Guest Editor

The pollution of natural environments is a problem that concerns society as a whole, and for this reason, the development of technologies that make it possible to eliminate pollutants from natural environments is an essential practice. In recent years, a large number of materials have been evaluated for their possible applications as biosorbents, from dead biomass to living biomass, both free and immobilized; even different patents have been developed. For this reason, it is both interesting and necessary to dedicate a Special Issue to these processes, in which recent information on this technology can be compiled, and the latest research advances developed can be presented. In this Special Issue on "Recent Advances in Pollutant Biosorption Processes", researchers on this topic can publish their contributions. Topics for this Special Issue include, but are not limited to, the following:

- General laboratory studies on biosorption. Revisions are also welcome;
- The development of new materials (composite materials) for use in biosorption;
- Application of biosorption in bioremediation methodologies.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute either a research article or a comprehensive review for consideration and publication in *Processes* (ISSN 2227-9717). *Processes* is published in open access format – research articles, reviews, and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited, free access to the content. As an open access journal, *Processes* is supported by the authors and their institutes through the payment of article processing charges (APCs) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Giancarlo Cravotto

Department of Drug Science and Technology, University of Turin, Via P. Giuria 9, 10125 Turin, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q2 (Chemical Engineering (miscellaneous))
