

Special Issue

Interpersonal and Community Violence: Characteristics, Consequences, Prevention and Intervention

Message from the Guest Editors

In this Special Issue, we are interested in interpersonal violence, including aggression that occurs in intimate relationships and those actions perpetrated by strangers or acquaintances outside of family ties. Interpersonal violence refers to the intentional use of direct or indirect aggression and it can involve two or more people. It may be perpetrated by physical or verbal attacks, sexual assault, and it may also include withdrawal and isolation. This Special Issue aims to document the nature of the phenomenon, its consequences (at an individual, social, and economical levels), interventions, and prevention programs in different contexts. Contributions from across the globe, including non-western countries, are welcome. Learning from the failures, as well as successes, of prevention and intervention programs is important too. The listed keywords suggest only a few of many possibilities.
