

Special Issue

Feature Papers in *Psychiatry International*

Message from the Guest Editors

It's pleased to announce that the journal *Psychiatry International* is now compiling a collection of papers submitted exclusively by the Editorial Board Members of our journal and outstanding scholars in this field. International psychiatry is currently facing serious challenges triggered by the global economic crisis and the COVID-19 pandemic. These global events lead to the need to broaden our nosographic and therapeutic horizons, and to make use of the newest psychological approaches and the latest neuroscience acquisitions. A first focus of this Special Issue is on the psychological and psychiatric consequences of the pandemic. A second is on the new clinical applications and technologies in the fields of precision medicine, including genomics, neuroimaging, and microbiomics, which can also be integrated with each other through machine learning systems. These applications could provide new contributions, both in treatment personalization and in the evolution of nosographic systems. We expect these papers to be widely read and highly influential within the field. All papers in this SI will be collected into a printed edition book after the deadline, and will be well promoted.
