Reactivity and Applications of d-Block Metals: Innovation for Sustainability

Message from the Guest Editors

The importance of d-block metals has been known for centuries as they have been used for a variety of applications ranging from pigments to drugs. The accidental discovery of ferrocene in 1951 led to a rapid growth of the d-block metal chemistry, and since then, the development of organometallic chemistry has been remarkable. Many new classes of d-block metal complexes have been prepared, and numerous examples of new chemical reactivity have been reported. The current knowledge on d-block metal complexes is astonishing, and they can find applications in different areas and processes. In this context, d-block metals can play an important role in the pursuit for more efficient and cost-effective processes and solutions for our everyday lifestyle.

The goal of this Special Issue is to report on the most current trends and uses of d-block metal complexes, gathering a collection of articles that highlight the current significance of these compounds in the most varied fields of expertise.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Dmitry Yu. Murzin

Faculty of Science and Engineering, Åbo Akademi University, 20500
Turku, Finland

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
