

# Special Issue

## Recent Advances in Named Reactions

### Message from the Guest Editors

Since the first reported named reaction known as the Haloform reaction, which was realized in 1822 by Serullas and later named after Adolf Lieben, named reactions have played a critical role in organic synthesis for the preparation of an array of complex and diverse organic and bioorganic molecules as well as important industrial materials, such as polymers and elastomers. Named reactions enable more diversity in terms of reactivity, product generation, and ease of operation. They are exceptionally popular and have been widely used in basic research as well as in a number of industries, such as pharmaceutical, fuel, agrochemical, etc.

This Special Issue aims to highlight recent research progress in the field of named reactions and will be collecting original research papers, reviews, and commentaries that are focused on named reactions. We encourage scientists to submit research that broadens the efficiency and applicability of named reactions through the use of novel catalysts, the diverse reaction conditions, and widening substrate scopes.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Dmitry Yu. Murzin

Faculty of Science and Engineering, Åbo Akademi University, 20500  
Turku, Finland

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within ESCI (Web of Science), Scopus, EBSCO, and other databases.

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
