

Special Issue

Sustainable Management in Eco-Materials, Industrial Residues and Construction and Demolition Waste

Message from the Guest Editor

Due to the problems caused by climate change and especially the increase in the population, which leads to an accelerated consumption of raw materials and the generation of waste products, it is increasingly necessary to focus on the recycling of materials and to incorporate them back into the value chain to give them a new use and to avoid the consumption of new raw materials. The construction sector is a pioneer and has been recycling and reusing materials from its own industry but also from other industries for decades. This Special Issue takes a look at recycling and reusing materials to promote and contribute to tackling pollution and climate change.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Michele John
Sustainable Engineering Group, Curtin University, Perth, WA 6845,
Australia

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), FSTA, Inspec, AGRIS, and other databases.

Journal Rank:

CiteScore - Q1 (Management, Monitoring, Policy and Law)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.9 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2025).
