

Climate Modelling and Monitoring Using GNSS

Guest Editors:

Dr. Roeland Van Malderen

Royal Meteorological Institute of
Belgium, Avenue Circulaire 3,
1180 Bruxelles, Belgium

Prof. Dr. Marcelo Santos

Dept. of Geodesy and Geomatics
Engineering, University of New
Brunswick, P.O.Box 4400,
Fredericton, NB E3B 5A3, Canada

Prof. Dr. Kefei Zhang

School of Science, RMIT
University, Melbourne, Australia

Deadline for manuscript
submissions:

closed (15 October 2021)

Message from the Guest Editors

Global satellite navigation systems (GNSS) are a relatively new technology capable of retrieving IWW measurements from its zenith total delays globally, at a high temporal resolution and accuracy, and under all weather conditions. The main objective of this Special Issue is to strengthen the collaboration between the remote sensing GNSS and the climate (modelling) research communities. Particular areas that could be addressed include but are not limited to:

- The assessment and data mining of long-term (reprocessed) GNSS datasets for use in climate studies (homogeneity, spatial representativeness, temporal relevance, etc.);
- Use of GNSS long-term datasets to evaluate the performance of neutral-atmospheric models;
- Study of the long-term variability of integrated water vapor based on GNSS datasets, possibly in comparison with other datasets (from observations or models);
- Advocating data assimilation of GNSS neutral-atmosphere products in climate re-analysis of climate models;
- Impacts of assimilating GNSS neutral-atmosphere into re-analysis models.

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Prasad S. Thenkabail

Western Geographic Science
Center (WGSC), 2255, N. Gemini
Dr., Flagstaff, AZ 86001, USA

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
