closed (1 March 2019)

Message from the Guest Editors

Dear Colleagues,

Why are we opening a Special Issue of *Remote Sensing* on the assessment of Trees Outside Forests (TOF)?

The answer is simple: it is generally acknowledged that trees have important economic and ecological functions—and we find trees not only in but also outside forests, both on natural and managed lands. The interest in TOF has actually been increasing constantly over the past decades both from a resource point of view and from an ecological perspective. The planned Special Issue of *Remote Sensing* focusses on remote sensing to support the assessment of TOF. Contributions on any challenge in that context are welcome: purely technical remote sensing issues, issues of field sampling, modelling, harmonizing definitions, defining specific objectives, combination with other forest or landscape inventories, etc.

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.
Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
