Prof. Dr. Francisco Agüera-Vega
Department of Engineering, University of Almería, Almería, Spain

Dr. Patricio Martínez-Carricondo
Department of Engineering, University of Almería, Almería, Spain

Deadline for manuscript submissions:
closed (31 March 2021)

Message from the Guest Editors

Dear Colleagues,

Photogrammetry based on Unmanned Aerial Vehicles (UAV photogrammetry) is an irruptive technology that is being applied to obtain very-high-resolution Digital Surface Models, orthoimages, and point clouds which represent terrain morphology.

UAVs introduce new possibilities for photogrammetric projects thanks to their flexibility of route planning, on-board GNSS navigation devices, or inertial data synchronized with shotting.

Photogrammetric software has experimented parallel development, especially with the implementation of the Structure from Motion (SfM) algorithm to efficiently manage imagery capture by sensors on-board UAVs, working not only in the visible spectrum but also the infrared, multispectral, and hyperspectral wavelengths.

For this Special Issue of *Remote Sensing*, we welcome authors to submit papers related to UAV photogrammetry. The selection of papers for publication will depend on the quality and rigor of research. Specific topics of interest include, but are not limited to the following:

- UAV photogrammetry planning;
- UAV photogrammetric devices;
- UAV photogrammetric algorithms;
- UAV photogrammetric products and their applications.

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.
Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
