Message from the Guest Editors

Dear Colleagues,

Diverse global and regional remote sensing products with multiple spatial and temporal resolutions are available for monitoring land surface albedo, such as MODIS, MISR, AVHRR, Landsat, MSG, and Meteosat. The land surface albedo can also be estimated with images acquired by unmanned aerial vehicles (UAV). Studies of the land surface albedo generally include three categories: data acquisition, assessment of products, and applications. Knowledge of land surface albedo has been increasingly accumulated in recent years, but there are still challenges and new problems for the three categories of studies.

The aim of this Special Issue is to present latest research of applying land surface albedo in addressing the urban, climate, environmental, and social challenges. The Special Issue also encourages studies that integrate new technologies and methods to acquire more accurate and efficient data at various spatial scales.

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank: JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
