Remote Sensing to Support Forest Biodiversity Assessment and Sustainable Forest Management

Guest Editors:

Dr. Giovanni Santopuoli
Department of Agricultural, Environmental and Food Sciences, University of Molise, 86100 Campobasso, Italy

Dr. Ivan Sačkov
Department of Forest Policy, Economics and Forest Management, National Forest Centre, Forest Research Institute, T. G. Masaryka 22, Zvolen, Slovakia

Prof. Dr. Bruno Lasserre
Department of Biosciences and Territory, University of Molise, Via Francesco De Sanctis, 1, 86100 Campobasso, CB, Italy

Deadline for manuscript submissions:
closed (31 October 2021)

Message from the Guest Editors

Dear Colleagues,

Balancing the conservation of forest biodiversity and the delivery of other forest ecosystem services is mandatory for reaching the sustainable forest management aims, and represents the main pillar of the newest integrate forest management approach. Over the years, remote sensing techniques have been increasingly contributing to monitoring and assessing forest biodiversity-related characteristics and functions.

Considering that the interest and studies for observing and investigating on the tree-related microhabitat is increased in the last decade, as a tool for supporting integrate forest management approach, this forthcoming Special Issue on "Remote sensing to support biodiversity assessment and sustainable forest management" calls for original research papers with focus on the development of new or improvement of existing methodological approaches for assessing forest biodiversity through remote sensing. Papers focused to assess forest structure, to develop useful forest biodiversity indicators, as well as concerned to the tree-related microhabitat, are welcomed.

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.
Journal Rank: JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
