Deadline for manuscript submissions:
closed (31 July 2021)

Message from the Guest Editors

Wetlands cover approximately 6% of the terrestrial surface and provide important and diverse benefits to people around the world. However, an increasing number of wetlands are being converted to agricultural or urban uses or affected by natural factors like drought. Despite efforts to restore natural wetlands for human well-being, more than half of the global wetlands have disappeared during the last century. These changes directly affect the world biotic diversity and contribute to local and regional climate changes as well as to global warming. Thus, in recent years, changes impacting on the size and quality of the world’s wetland ecosystems have raised increasing concerns.

Remote Sensing provides unique capabilities and advantages to characterize and measure the state, conditions, and functioning of inaccessible wetlands. Since the launch of the Landsat series in 1972, there has been an exponential increase in the number of satellites and airborne sensors conveying information about wetlands. Today, more than 300 earth observation satellites from more than 15 countries are operational.

**Message from the Editor-in-Chief**

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

**Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.  
**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.  
**Journal Rank:** JCR - Q1 (*Geosciences, Multidisciplinary*) / CiteScore - Q1 (*General Earth and Planetary Sciences*)
