

Special Issue

Spatio-Temporal Analysis of Urbanization Using GIS and Remote Sensing

Message from the Guest Editor

This Special Issue aims to focus on two components that influence the result of the typical urbanization research, firstly different kinds of data sources (e.g., generated with remote sensing) and secondly their interaction with the relevant spatial analysis in GIS. In addition to the two, there is a third, temporal dimension, which integratively implements the conceptual complexity.

The SI aims to examine a complex temporal component of the geospatial approaches to the data that come from various sensors and data sources, where the continuous nature of the time needs to be quantized into discrete forms, which can be further analyzed with the remote sensing and GIS tools.

We suggest themes that focus on optimal solutions between types of spatial data sources and Spatio-temporal analysis in RS and especially in GIS to get an optimal result. We propose to focus the authors' solutions primarily on the improved data sets, new methods, and overall innovative solutions, where the applications are primarily presented in the form of the use cases.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
