

Special Issue

Big Data Analytics in Geospatial Artificial Intelligence

Message from the Guest Editors

This Special Issue aims to present fundamental research studies combining innovative ideas in spatio-temporal data management, data mining, machine learning, and high-performance computing to analyze big geospatial data. Research studies which will be considered for this Special Issues may be related to the following three scopes of remote sensing: geometric reconstruction, change detection, and data fusion and data assimilation. Suggested topics for research include the following:

- Topic exploration and event detection from geospatial data.
- Big trajectory data management and analytics.
- Parallel computing framework and algorithms for fundamental operations regarding geospatial data.
- Location-aware prediction (e.g., POI recommendations, next-location predictions).
- Effective indexing structures for geospatial data.
- Route planning and recommendations on the basis of geospatial data.
- Spatio-temporal query processing and optimizations.
- Other innovative techniques related to GeoAI.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
