Special Issue

Remote Sensing Application in Coastal Geomorphology and Processes

Message from the Guest Editors

The coastal zone is characterized by exceptional environmental, social, and economic importance while, at the same time, being particularly vulnerable to climate-related changes. Remote sensing applications have enormous potential to monitor this intrinsically dynamic environment through remote observations and measurements that can provide important insights on coastal condition and coastal evolution, at different geomorphologic settings and timescales. This Special Issue invites you to submit high-quality research that makes the most of remote sensing applications (from optical, radar and others) at the coastal zone, addressing issues that include, but are not limited to:

- Sediment dynamic processes on deltas, beaches, dunes, and barrier islands
- Coastal processes in erosional landscapes as rocky cliffs
- Forcing mechanisms of the coastal processes as waves, tides, and currents
- Coastal geomorphology
- Coastal evolution
- Close-range remote sensing applications as plane or UAVs, and onsite cameras or webcams
- Contributions of remote sensing to coastal management

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peerreview process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
