

Special Issue

Remote Sensing of Crop Residue and Non-photosynthetic Vegetation

Message from the Guest Editors

Maintenance of crop residue cover (CRC) on the soil surface benefits the environmental performance of cropping systems, reducing soil and nutrient loss, evaporation, and soil temperature. Remote sensing techniques have been developed to detect crop residue and monitor adoption of conservation tillage.

Multispectral and hyperspectral data have been used to measure CRC using broad spectral contrasts between shortwave infrared (SWIR) and near infrared reflectance, as well as narrow contrasts measuring cellulose absorption in the SWIR. However, challenges remain to development of robust operational mapping of CRC, including need for scene-specific calibration, influence of moisture content on spectral features, diversity in residue and soil characteristics, and interference from green vegetation. The range of capabilities in proximal, airborne, and spaceborne sensors is broad. The goal of this special issue is to advance remote sensing applications to address these concerns.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
