Special Issue

Time-Lapse Geophysical and Remote Sensing-Based Imaging and Diagnosis on Urban and Natural Hazards

Message from the Guest Editors

Geophysical and remote sensing imagery are traditionally two distinctive scientific disciplines. In this Special Issue, they are connected to jointly image, classify and diagnose urban and natural hidden hazards in different parts of the world. In many cases, geophysical technologies image the subsurface hidden and deep hazards with lower resolution while the remote sensing technologies image the signs of those hazards on the surface with high resolution. These hazards only become worse with time, thus making time-lapse, large-scale and geo-referenced imaging the most viable means for full-scale imaging, classification and diagnosis.

This Special Issue aims to promote time-lapse remote sensing imagery and geophysical images for the imaging, classification and diagnosis of urban and natural hidden hazards. It encourages the scientific community to 'go back' to repeat the geophysical survey in the areas of interest and making correlation to the remote sensing imagery, which is already time-lapse in nature. We welcome high-quality publications emphasizing the joint use of time-lapse geophysical and remote sensing imagery.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail
Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
