

## Special Issue

# Meteorological Remote Sensing Algorithm and Applications for Clouds and Precipitation

### Message from the Guest Editors

Data and data products are the basis of meteorological scientific research and weather forecasting. With the development of technology, a wide range of meteorological remote sensing equipment has been developed. These devices provide us with huge amounts of data, and it is critical to process these data to obtain physical information about clouds and precipitation. This Special Issue focuses on recent advances in radar and satellite remote sensing algorithms for clouds and precipitation. These algorithms may include, but are not limited to, meteorological data quality control, the retrieval of clouds and precipitation properties, quantitative precipitation estimation or forecasting, and the assimilation of radar or satellite data in numerical weather prediction. Research may address the improvement of traditional algorithms and the development of new algorithms. Current machine-learning-related algorithms are also very welcome.

## About the Journal

### Message from the Editorial Board

*Remote Sensing* is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

### Editors-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Prof. Dr. Dongdong Wang

Institute of Remote Sensing and Geographic Information Systems, Peking University, Beijing, China

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

#### Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
