

Special Issue

Application of MODIS Data for Environmental Research

Message from the Guest Editors

The open access Moderate Resolution Imaging Spectroradiometer (MODIS) on-board the Terra (available from February 2020) and Aqua (available from July 2002) satellites provide environmental observations like land-surface temperature (both day and night), snow cover, aerosol, total precipitable water, vegetation index, evapotranspiration, and water masks at a high temporal scale. The science team of MODIS has been continuously working to update the algorithms in order to provide improved estimates for each product. Through this Special Issue, we invite contributions from researchers working in the field of environmental sciences using any MODIS dataset or product. The contribution can be related to (but not restricted to) the following:

- advancement in the use of MODIS data in environmental science;
- data fusion with other satellite products;
- development of algorithms for accuracy assessment and filling in data gaps;
- comparison with station-based observations;
- reconstruction using geophysical model;
- assessment of long-term environmental changes;
- prediction of future changes.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
