Special Issue

Remote Sensing for Engineering and Sustainable Development Goals

Message from the Guest Editors

The United Nations 2030 Sustainable Development Goals are one of the common goals (SDGs) of governments and all mankind. The construction of infrastructure such as roads and energy power stations plays a vital role in the realization of the Sustainable Development Goals. Spatial information technology plays a fundamental role in infrastructure construction. Studies examining how to use remote sensing and other spatial information technologies to help the realization of the United Nations 2030 Sustainable Development Goals and the tracking of the SDGS progress have received more and more attention. Spatial information technology helps engineering construction to be more sustainable. It also makes the management of government departments more intelligent and information-based when dealing with sustainable development goals. Spatial information products are also becoming an increasingly important data source for tracking the achievement of the Sustainable Development Goals.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail
Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
