

Special Issue

Remote Sensing for Vegetation Phenology in a Changing Environment

Message from the Guest Editors

Climate changes, including warming and elevated variability, substantially influence the phenology of terrestrial vegetation, which in turn feeds back to the climate via altered carbon and water dynamics. Plants respond to the changes in climate from local to global scales and from natural to urban systems. Therefore, monitoring changes in phenology and exploring climate and other drivers of phenology changes can advance the mechanistic understanding of phenology changes, which will significantly contribute to the studies of climate and related global carbon dynamics.

The focus of this special issue is the applications of remote sensing science and technology to address the challenges in the vegetation phenology studies in a changing environment. Ground monitoring based on phenology images has been frequently used for various vegetation types in North America and other countries. Multisource satellite images at moderate spatial resolution and high temporal frequency have been widely applied in monitoring and understanding interannual changes and long-term trend of phenology in various ecosystems, such as forests and agricultural lands.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
