Special Issue

Space LiDAR Technologies and Applications

Message from the Guest Editor

LiDAR, light detection and ranging using lasers is an active remote sensing technique that continues to experience significant advances and progress for space applications. Laser ranging technology was firstly applied in 1964 to determine the orbit of the Beacon Explorer-B satellite equipped with a laser retro-reflector array and provided the precision level of several meters at that time. However, Space LiDAR has been considered a promising sensor for the many space missions because the round-trip flight time of laser pulses provides meter or even centimeter range resolution by employing ultra-short pulse lasers. In addition, precise laser ranging is also required to improve the orbital prediction accuracy of space debris for mitigation or elimination of a significant threat to human space activities as well as operational satellites. Currently, Space LiDAR have reached a high degree of maturity and sophistication thanks to the innovative development of optical and electronic technologies which allow for successful implementation in space missions. Hence, this Special Issue calls for not only innovative and challenging technologies but also applications related to Space LiDAR.

About the Journal

Message from the Editorial Board

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editors-in-Chief

Dr. Prasad S. Thenkabail
Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Prof. Dr. Dongdong Wang
Institute of Remote Sensing and Geographic Information Systems, Peking University, Beijing, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
