Remote Sensing in Coastal Ecosystem Monitoring II

Message from the Guest Editors

Dear colleagues, Coastal locations and their adjacent areas are characterized by wide biodiversity, ecosystem variety, and remarkable biological productivity. Native vegetation in coastal areas plays an important role in determining morphology, stabilizing the surface, and providing a habitat for wildlife. The monitoring and conservation of coastal vegetation are important for the long-term protection of coastal ecosystems. Evaluating changes at the land use/land cover (LU/LC), vegetation, and habitat levels implies different thematic and spatial scales of observation, and is essential in the development of efficient management strategies. Remote sensing techniques have proven to be powerful and cost-effective tools for the long-term monitoring of the Earth's surface on a global, regional, and even local scale, by providing important coverage, mapping, and classification of land cover features such as vegetation, soil, and water.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
