Special Issue

Remote Sensing Measurements for Monitoring Achievement of the Sustainable Development Goals (SDGs)

Message from the Guest Editors

The 2030 Agenda for Sustainable Development reflects a global consensus and commitment of countries to action towards ending poverty and hunger, protecting the planet, fostering peaceful, just and inclusive societies and ensuring that all people enjoy prosperous and fulfilling lives and that economic, social and technological progress will occur in harmony with nature.

The increasing availability of satellite data has transformed how we understand, monitor and achieve the 2030 Sustainable Development Goals. Satellites capture many of the physical, economic and social characteristics of Earth, providing a unique asset for developing countries, where reliable socio-economic and demographic data is often not consistently available.

The purpose of this Special Issue is to stimulate progress in remote sensing research into measuring the SDGs and monitoring the progress of countries towards achieving them. The issue will bring together novel studies, methods and measurement techniques that utilize remotely sensed data to monitor countries` progress towards achieving the SDGs and improve the timeliness, coverage, and quality of SDG related data.

About the Journal

Message from the Editorial Board

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peer-review process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editors-in-Chief

Dr. Prasad S. Thenkabail
Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Prof. Dr. Dongdong Wang
Institute of Remote Sensing and Geographic Information Systems, Peking University, Beijing, China

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
