Special Issue

Remote Sensing of Vegetation Proportion, Attribute, Condition, and Change

Message from the Guest Editors

Remote sensing is a powerful and dynamic synoptic tool for global monitoring. In the last few decades, various methodologies have been developed for remote monitoring of vegetation. In recent years, we have also seen a significant increase in the number of Earth observation satellites and unmanned aerial vehicles, which is expanding remote sensing observations in spectral, spatial, radiometric, and temporal domains. Coupled with this progress, recent rapid advances in artificial intelligence/machine learning techniques and decreasing costs of computing are driving current cutting-edge research toward analysis of newer and spatiotemporally denser data sets. This Special Issue invites papers that use remotely sensed data with stateof-the-art algorithms to quantify vegetation proportion. attribute, condition, and change over land. We invite original research articles, letters, and short communications. For more details, please scan the QR code.

About the Journal

Message from the Editor-in-Chief

Remote Sensing is now a prominent international journal of repute in the world of remote sensing and spatial sciences, as a pioneer and pathfinder in open access format. It has highly accomplished global remote sensing scientists on the editorial board and a dedicated team of associate editors. The journal emphasizes quality and novelty and has a rigorous peerreview process. It is now one of the top remote sensing journals with a significant Impact Factor, and a goal to become the best journal in remote sensing in the coming years. I strongly recommend *Remote Sensing* for your best research publications for a fast dissemination of your research.

Editor-in-Chief

Dr. Prasad S. Thenkabail

Senior Scientist (ST), U. S. Geological Survey (USGS), USGS Western Geographic Science Center (WGSC), 2255, N. Gemini Dr., Flagstaff, AZ 86001, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubAg, GeoRef, Astrophysics Data System, Inspec, dblp, and other databases.

Journal Rank:

JCR - Q1 (Geosciences, Multidisciplinary) / CiteScore - Q1 (General Earth and Planetary Sciences)
