Special Issue

Clinical Research on Oral Diseases

Message from the Guest Editor

Throughout the decades, clinical research in the field of oral diseases has remained fundamental for the proper identification of pathologies occurring in the head and neck and, subsequently, for the choice of the most appropriate therapy. It still remains the main focus of advanced studies today. Also, the correct dental/prosthetic rehabilitation of such patients requires extensive knowledge of these diseases to provide the patients with appropriate treatment. The aim of this Special Issue is to provide a platform for clinicians who want to report on a single case or case series, as well on clinical research studies or review studies in the wide topic of oral diseases including the various techniques for the proper rehabilitation (both functional and aesthetic) of such patients.
