Message from the Guest Editors

Dear Colleagues,

Gynecologic oncology is a rapidly evolving field of medicine that integrates knowledge from various fields and often requires a multidisciplinary approach when planning the treatment. Clinical, radiological and molecular information must all be included in the treatment plan. Recent molecular advances in endometrial and ovarian cancer have improved our understanding of these diseases and their response to treatment and moved the trend of treatment towards personalized medicine. There are, however, still many questions that remain unanswered, such as the best approach in advanced ovarian cancer, the role of neoadjuvant chemotherapy in fertility-sparing treatment of cervical cancer, and many more. This Special Issue aims to answer these seemingly unanswerable questions.
