

Topical Collection

Reproductive Medicine in Europe

Message from the Collection Editor

The contribution of European countries to reproductive medicine research is enormous. It seems interesting to know and share the research of European scholars in reproductive medicine so that one can understand the progress of the field in this region, compare it with other countries, and predict future directions. This topical collection aims to bring together scholars, professors, researchers, and administrators from Europe to use state-of-the-art technologies and concepts to significantly improve the field of reproductive medicine.
