Deadline for manuscript  
submissions:

**closed (8 January 2021)**

### Message from the Guest Editor

Worldwide, the food industry represents a very important sector capable of supplying huge amounts of food. Its relevance, however, has proportionally augmented its generation of waste. Over the last decade, a few European directives, regulations, and communications in relation with waste (disposal, reutilization, and reducing strategies) and sustainable use of natural resources have been published with the main purpose of protecting human and animal health and the environment. In order to achieve a more efficient production system that complies with European regulations, wastes and subproducts need to be re-utilized to increase their throughput that will positively impact their economical yield, while reducing their generation and thus protecting health and the environment. Different applications have been considered for re-using subproducts, even though the most efficient approach is the establishment of models that allow waste reduction. It is thus critical to update the food industry to include it into the circular economical trend to improve its economical throughput while protecting natural resources.

## Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, PubAg, AGRIS, RePEc, and other databases.

**Journal Rank:** JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Nature and Landscape Conservation)
