Message from the Guest Editors

Dear Colleagues,

Sustainability, local development, and ecology are keywords that cover a wide range of fields of research, including both experimental and social sciences. The transversal nature of this area creates synergies but also divergences, making a continuous review of the existing literature necessary to facilitate research. In recent years, there has been an increasing number of articles that analyze trends in literature and the state-of-the-art in any subject. This Special Issue of *Resources* seeks to discover future research lines for natural resources as well as to analyze past research from economic, social, and environmental perspectives. Of particular interest is theoretical research about the retail sector, local development, and sustainability. Bibliometric methods are especially welcome.
