Message from the Guest Editor

Dear Colleagues,
Planning a mining operation is often based largely on key economic indicators, such as Net Present Value (NPV) and Internal Rate of Return (IRR). With an increasing public awareness and interest in sustainable practices, mining operations are increasingly forthcoming with their strategies in regards to environmental, social, safety and community outcomes. Maintaining best practice processes to ensure sustainability at all stages across a mine's life, from initial prospecting through to closure, requires careful planning. The importance of this will only grow as mining operations in general are faced with declining grades while having to operate at greater depth in more sensitive environments, with an expectation to reduce water, energy and the consumption of other resources. As such, sustainability aspects are ideally embedded and intergrated into the mine planning process from the very outset rather than being considered in isolation. This Special Issue endeavors to seek out and present the latest approaches to incorporate sustainability aspects into the mine planning process (both in the short term and long term).

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank: JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Nature and Landscape Conservation)
