Integrated Urban Water Resources Management and Policy

Message from the Guest Editor

The water supplied to urban settlements is called urban water. Urban water is expected to meet specific requirements, presupposes careful governance, including policy-making and implementation processes. Policies include various decisions form the framework of CPR. The implementation process includes all the required actions and procedures aimed at realizing a policy. It is evident that policy decisions and implementation procedures are interlaced and interactive. Water pricing influences the choice of resources used, the required system capacity, and the demand. Likewise, the tariff structure influences attitudes and efficiency, which also influences the management of resources. The scope of the SI comprises the study of the interactions involved in the policy-making and implementation procedures of urban water supply systems. This includes, an integrated model based on optimization theory, systems theory, game theory, computational sociology, or a holistic survey regarding the acceptability of solutions, public participation, habits, and their influences on the system. The objective is to provide tools and knowledge that help to achieve better governance of the systems.

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan

Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1
(Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.3 days after submission; acceptance to publication is undertaken in 4.5 days (median values for papers published in this journal in the second half of 2025).
