

## Special Issue

# Multiple-Effect Water Resources Management

### Message from the Guest Editor

In recent years, the environment and especially water resources have been experiencing significant stress, resulting in water-related problems in many regions around the world. Surface and groundwater resources are continuously degraded as a result of agricultural activities, industrial wastes, as well as urban and touristic activities. In addition, climate change and the increasing rate of global warming, over the last few decades, has intensified the hydrological cycle, and increased the globally averaged precipitation, evapotranspiration, and runoff as an aftermath. Based on the above, there are geoinformatic techniques and other tools of high importance, through which hydrological processes can be simulated or predicted under different climate conditions and anthropogenic innervations. Apart from the above, this Special Issue highlights water-saving approaches in the agricultural sector, as well as investigates land use changes as an adaptation practice in water shortage rural areas.

## About the Journal

### Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

---

### Editor-in-Chief

Prof. Dr. Benjamin McLellan  
Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

### Author Benefits

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

#### Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1  
(Nature and Landscape Conservation)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 26.1 days after submission; acceptance to publication is undertaken in 4.4 days (median values for papers published in this journal in the second half of 2024).
