Big Data Initiative on Resources Management

Message from the Guest Editor

Early twenty-first century has witnessed depletion in many of the world's natural resources, along with increasing waste due to the expansion of human economic activities in an unsustainable way. The study of resource management has attracted the broad attention of scholars, with the application of different types of data. Single source or small scale of data has limitations in explaining such complexities comprehensively. On the contrary, big data can provide holistic understanding of such systems and facilitate achieving sustainable natural resource management. This SI is exploring and examining the role of big data in resources management. In particular, we are looking for:

- Empirical research based articles that examine the interdisciplinary contribution of big data for managing biotic and/or abiotic resources.
- Conceptual paper that provides a comprehensive review and/or theoretical frameworks and methodology for conducting big data research in managing different kinds of resources.
- Case studies of the application of big data or multiple types of data in studies of resources management from a s

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan
Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GEOBASE, GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1
(Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.3 days after submission; acceptance to publication is undertaken in 4.5 days (median values for papers published in this journal in the second half of 2025).
