

Special Issue

Energy Efficiency in Water Distribution and Supply Systems

Message from the Guest Editors

Water distribution and supply systems are generally characterized by low efficiency and high energy demand, with high levels of leakage, a strong carbon footprint and expensive management costs. New management policies are thus required, involving optimal strategies, smart devices and innovative control techniques to reduce water losses, increase the efficiency of the water systems, reduce the energy demand and the carbon footprint. This Special Issue aims to collect new studies in the field, providing the scientific community with effective tools to improve the efficiency of the water industry. The authors are invited to present novel papers on this subject, including:

- New studies on specific devices (i.e. pump as turbines –PATs, or micro turbines) to save energy and reduce leakage in water systems
- New design solutions for plants or new plant operations for the smart control of the distribution and supply networks
- New strategies to optimize the management of the whole network, i.e. the optimal location of smart devices, smart control techniques, new methods of analysis of the efficiency of the system

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan

Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1
(Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.6 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
