Special Issue

Construction Supply Chain Management for Circular Economy

Message from the Guest Editor

Of all industrial sectors, building and construction sector has been deemed to consume the most natural resources and raw materials. Construction material manufacture and construction works contribute largely to greenhouse gas emissions and waste. The circular economy (CE) aims to improve resource efficiency and reduce raw material consumption across sectors. In building and construction, much work has been done in research and practice to apply CE to the sector. However, major obstacles are linked to the unstable nature of construction works and the supply chain. Solutions lie in novel approaches to managing supply chains, including but not limited to closed-loop supply chains, applying circular design principles, circular procurement and sourcing, and reverse logistics. These approaches can both reduce amounts of raw materials used in construction materials and projects and increase the potential of the extended life cycle use of materials and the reuse of waste as well. This SI is aimed at theoretical and empirical research contributions developing and studying novel approaches to supply chain management in building and construction that support the aims and effects of the CE.

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources–from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.
Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan
Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1 (Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.6 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
