Reuse of Treated Wastewater in Irrigation: Exploring the Current Challenges and Opportunities through Life Cycle Thinking Tools

Message from the Guest Editor

Water scarcity is threatening the sustainability of food production. Given the current trends and future climate change projections, agriculture will have to rely more on the use of non-conventional water and Treated Wastewater. Wastewater reuse in agriculture has certain benefits, by maintaining or increasing crop yields, providing water and nutrients for the cultivation of crops, and suppressing effluent discharges and the associated nutrient contributions to receiving waters. On the other hand, water reclamation can introduce more challenges from additional efforts in energy, chemicals, and infrastructure. Therefore, the global sustainability of the reuse of treated wastewater in irrigation has to be verified by looking through a systemic lens and taking into account upstream and downstream processes.

This Special Issue welcomes research on the application of life cycle thinking tools aimed at increasing the level of knowledge and stimulating debate about the “attractiveness” of treated wastewater as a resource in irrigation under a life cycle perspective.

About the Journal

Message from the Editor-in-Chief

Responsible prosperity is underpinned by sustained access to resources. *Resources*, publishes excellent science and scholarship which transforms understanding, practices and policies for conserving all natural resources—from water, land and air; to plant and animal biodiversity; to minerals and energy and their interconnection across scales. Significantly, we invite high quality submissions from natural and social sciences.

Build impact from your research by submitting to *Resources*, an open-access journal connecting you with data, insights, ideas and evidence needed to shape a better world.

Editor-in-Chief

Prof. Dr. Benjamin McLellan

Graduate School of Energy Science, Kyoto University, Yoshida-honmachi, Sakyo-ku, Kyoto 606-8501, Japan

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), GeoRef, PubAg, AGRIS, RePEc, and other databases.

Journal Rank:

JCR - Q2 (Environmental Sciences) / CiteScore - Q1
(Nature and Landscape Conservation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.6 days after submission; acceptance to publication is undertaken in 4.6 days (median values for papers published in this journal in the first half of 2025).
